

Portrait art draws on certain principles of harmony (proportions, colours, etc.). We will apply these to the participants to create their digital portraits in full dress.

We gather the information needed to create the portrait

All the measurements required for the digital reconstruction of the body are taken automatically.

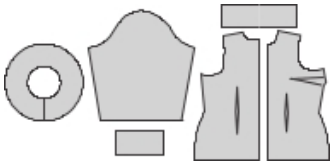

A colour chart is used to identify each individual's underlying colours (skin and hair).

Taking a photograph allows us to record eye colours and calculate proportions for the neckline.

We use a set of customisable patterns, tailored to each body shape

ask you questions about your clothing shopping habits.

We track changes in your clothing purchases over a 6-month period, using the receipts you send us.

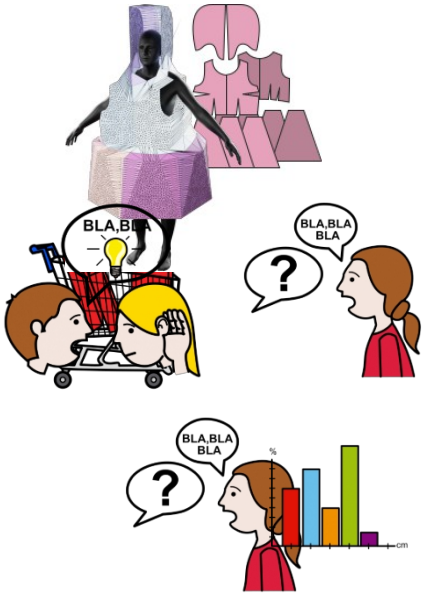

At the end of these six months, we'll take stock. Has your portrait led you to change your habits? To what extent, and why?

We'd then like to hear your thoughts on this portrait and discuss your clothing purchases!

We'll explain the choice of clothes for your digital portrait in full attire, gather your feedback, and

We create personalised, made-to-measure sewing patterns in your chosen colours

We produce a digital portrait of you in clothing
